

Setup Guide

Print this out. Tick each box as you go. That's the whole job.

Before you start: you don't need to understand GitHub, Copilot, or Codespaces to finish this list. You just need to click the things this page tells you to click, in order. If a step doesn't make sense, that's normal — do it anyway, it'll make sense once it's done. Nothing here is fragile; you can't break anything permanently.

TARGET 1 — ORG & SEATS

Thu 30 Jul

TARGET 2 — RUN-THROUGH

Fri 31 Jul

1

Your GitHub account

Skip if you already have one

- ☐ Go to **github.com** → click **Sign up** → enter email, password, username
- ☐ Check your email for a verification code → enter it

2

Create the organisation

This is separate from your personal account — it sits alongside it

- ☐ Click the **+** icon top right → **New organisation**
- ☐ Choose the **Free** plan
- ☐ Give it a short, simple name — write it here so you don't forget: _____

3 Turn on Copilot, buy 2 seats

- ☐ Go to your organisation page → **Settings** tab → find **Copilot** in the left menu
- ☐ Click **Enable GitHub Copilot** → choose **Business** → set seats to **2**
- ☐ Find the **Policies** section → set Copilot access to **All repositories**

⚠ Don't skip this. If it's set to "org repos only," Copilot silently won't work later — with no error message to tell you why.

4 Build the workshop repo

- ☐ Click **+** → **New repository** → owner = your personal account (not the org) → name it `novapay-workshop` → set **Public** → tick **Add a README**
 - ☐ Click **Add file** → **Upload files** → drag in `bank-dashboard.html`, `starter-template.html`, and `challenge.js` → **Commit changes**
 - ☐ Click **Add file** → **Create new file** → in the filename box, type exactly:

`.devcontainer/devcontainer.json`

Then paste in the contents of your `devcontainer.json` file → **Commit new file**
 - ☐ Go to repo **Settings** → tick **Template repository**
-

5

Install Nova (your AI mentor)

One file, one paste — nothing to install on your computer

☐ On the same repo, click **Add file → Create new file**

☐ In the filename box, type **exactly this** — copy it if you can, don't retype from memory:

.github/copilot-instructions.md

▲ This filename is the one thing in the whole setup that must be perfect. One typo and Nova simply never switches on — with no error to warn you.

☐ Open `copilot-instructions.md` from your materials pack → select all (Ctrl/Cmd+A) → copy → paste the whole thing into the big text box on GitHub

☐ Scroll down → click **Commit changes**

6

Give yourself a Copilot seat

☐ Org → Settings → Copilot → **Seat management** → **Add users** → select yourself

That's Target 1 done. Org exists, Copilot's on, 2 seats bought, repo built with all 3 files (`bank-dashboard.html` , `starter-template.html` , `challenge.js`) plus Nova installed, your seat assigned. Nothing left to click until Friday.

Test the whole thing yourself

This is the step that actually proves it works — do this on Friday

- ☐ Go to your repo → click **Use this template** → **Create a new repository** → name it `test-novapay`
- ☐ On the new repo, click **Code** → **Codespaces** tab → **Create codespace on main** → wait (1–2 minutes first time)
- ☐ Right-click `bank-dashboard.html` in the file list → **Open with Live Server** → confirm the banking dashboard actually appears
- ☐ Click the Copilot icon on the left sidebar → in the chat box, type exactly:

Who are you?

It should describe itself as a NovaPay mentor — not a generic "I'm GitHub Copilot."

⚠ Generic answer instead of "Nova"? Go back to Part 5 and check the filename character by character.
- ☐ Ask it something like "why isn't the balance showing?" — it should nudge you with a hint, not just hand you the fixed code straight away
- ☐ Open `starter-template.html` — confirm it opens and looks sensible
- ☐ Go to the test repo's **Settings** → scroll to the bottom → **Delete this repository**

That's Target 2 done. You've now personally seen every part of the participant journey work. You are ready.

! One date-sensitive thing

If you want a real second person (not just yourself) in Friday's test, they need to accept an org invite before you can give them a seat. **Send that invite today or tomorrow** — email replies aren't instant, and Thursday is too late to be sure.

Every step above is also written up with pictures-in-words detail in **facilitator-setup-guide.html**, if you want more explanation on any single step. This page is the condensed version to tick through with a pen.
