

Prompts Cheat Sheet

Every vetted prompt across the whole day, in one place — none of these give away a real bug

Bug Hunt — hand these out if a group is stuck

"Are there any bugs in this code?"

"I clicked this button and nothing happened — what could cause that?"

"What does this function do?"

"Why might a number show up as NaN instead of a value?"

"How do I check if two IDs used in different places actually match?"

"Can you explain this CSS rule to me?"

Level Up — Round 1, Fix the Bug

"Can you review this function for bugs? Pay attention to how the interest rate is being used."

If stuck after that: "Is the 5% rate being treated as 5, or as 0.05?"

Feature Creation — Y9–Y10

"Why isn't my progress bar changing width?"

"My button click isn't doing anything — what's wrong with this function?"

"Explain what getElementById does in plain English"

Feature Creation — Y11

"Review this function for edge cases I might have missed"

"Suggest a way to make this code more readable"

Feature Creation — Y12–13

"Are there any bugs or inefficiencies in this code?"

"How would you refactor this to be more maintainable?"

Anytime — universally useful

"What problem am I trying to solve right now?"

"I expected X to happen when I did Y, but Z happened instead. Why?"

"The console shows this error: [paste it]. What does it mean?"

All of these are generic technique prompts — none of them describe a specific real bug's symptom. Safe to hand out freely.
