

Session Day Script

Hold this. Follow it top to bottom. Every line you need to say is already written.

You don't need to know the answers today. Your job is to run this script and point people at Nova when they're stuck on something technical. Every "say this" line below is exactly what to say, word for word if you want it. Ticking a box doesn't mean it went perfectly — it means you did the step. That's enough.

0:00-1:00

Bug Hunt

1:00-1:30

Level Up

1:30-2:15

Tutorial + Plan

2:15-4:00

Create + Show

0:00 Welcome 10 min

- ☐ Share the repo URL on screen
- ☐ Ice breaker out loud: "What's one thing that annoys you about a bank app?"
- ☐ Pair people up — mix ages where you can

SAY THIS

"Today you're going to build a real feature for a banking app — from idea to working demo. We'll start by doing what every developer does first: fix what's broken."

0:10 Copilot demo 15 min

- Type a comment, let Copilot suggest, press Tab
- Open Copilot Chat, ask it to explain some code

SAY THIS

"Copilot is a very fast autocomplete that's read most of the internet. It's not always right. Your job is to understand the problem — Copilot helps you write it faster."

0:25 Bug tutorial — everyone together 10 min

- ☐ Everyone opens `how-to-find-fix-bugs.html` and follows the worked (fake) example together

This is deliberately not one of the real 10 bugs — it teaches the method (Look → Use → Read → Fix → Test) before anyone touches the real dashboard.

0:35 Bug hunt — on your own 20 min

- ☐ Put `bug-hunt-screen.html` on the projector, leave it up
- ☐ Remind them to log finds in `bug-test-plan.html` (or the paper version) as they go
- ☐ Step back — let them use Nova in Copilot Chat

10 bugs total. Easy ones are visible on the page. Harder ones need the console (F12). Nova gives hints, not answers — that's deliberate, don't worry if students seem to be getting nudged rather than told.

0:55 Share out 5 min

- ☐ Ask 2–3 people: "What did you find? How did Copilot help?"

SAY THIS

"That's the debugging loop — notice, investigate, fix, test. Copilot speeds up the middle part, but you're still the one running the loop."

1:00 The reveal + concepts 8 min

☐ Open `level-up-screen.html`, click through slides 1–4

SAY THIS

"You just used GitHub Copilot to debug a real banking app. It was trained on over a billion lines of code — more than any human could read in a lifetime. And it still gets things wrong sometimes. That matters."

1:08 3 challenge rounds 17 min

ROUND	WHAT	TIME
1. Comment Race	Type a comment, Tab-complete it, first working function wins	5 min
2. Best Prompt	One Chat message only — best result wins	5 min
3. Bug Blitz	Find the bug in Copilot's own function (interest rate ÷100)	7 min

☐ Click through slides 5–11 on the deck — timers are built in, click Start on each

1:25 Golden rules + bridge 5 min**SAY THIS**

"Three rules before we build: be specific, always test it, ask Nova to explain anything you don't understand. Now — let's build something real."

1:30 Brainstorm 15 min

☐ Open `brainstorm-screen.html`, slide 1

- Popcorn round (5 min) — shout out ideas, no filtering
- Cluster (3 min) — group into save / understand / plan
- Pick (7 min) — advance to slide 2, groups choose a feature

Stuck group? Point at the back-pocket gallery on slide 2. Savings Goal Tracker is the safe default — it matches the finished example you'll show them next.

1:30 Feature tutorial — everyone together 20 min

☐ Everyone opens `how-to-build-your-feature.html` and follows it together — a Savings Tracker, built from a genuinely blank file

This teaches every technique they'll need: page skeleton, colours, header, forms, then the logic. Same idea for everyone, on purpose — the brainstorm right after is where they pick something different.

1:50 Brainstorm 15 min

☐ Slides 1-2 on `brainstorm-screen.html` — popcorn round, then pick an idea

Stuck group? Point at the back-pocket gallery on slide 2 — just not the Savings Tracker, they've already built that one in the tutorial.

2:05 Plan on paper 10 min

☐ Slide 3 (4 questions) then slide 4 (timer) — keyboards down, paper only

SAY THIS

"Keyboards down. Every minute you plan saves five minutes of confused coding. Your sketch becomes your Copilot prompts."

2:15 Feature creation — first half 25 min

- ☐ Open `milestone-screen.html`, start its timer, set milestone 1 to "In Progress"
- ☐ Everyone creates a **new file** for their own idea and copies the colours/header across from `practice-feature.html` (built in the tutorial) to keep the NovaPay look

SAY THIS — THE METHOD

"One: write a comment describing the next small thing. Two: let Copilot suggest, press Tab. Three: save, check Live Server. Four: if it's wrong, ask Nova why. Small steps — comment, code, check."

Target by 2:40: heading exists, all inputs exist, a button exists, opens in Live Server without errors. Ugly is fine.

2:40 Checkpoint 5 min

- ☐ Every group says one sentence: what's working, what's next
- ☐ Advance milestone 1 on screen

2:45 Feature creation — second half 50 min

- ☐ Milestone 2 to "In Progress" — this stretch is the JavaScript + styling

At 3:20 — hard scope call for anyone not working yet: "Strip it back. One input, one button, one number on screen. Get that working, then add back." Say it to the whole room, not just the stuck group.

Groups that finish everything: milestone screen's right panel has stretch goals by year group — click the Y12–13 tab for the hardest ones.

3:35 Feature testing — code freeze 10 min**SAY THIS**

"Code freeze. Open your Feature Test Plan and try to break your own feature on purpose — empty fields, negative numbers, huge numbers. Fix what genuinely breaks."

- ☐ Point every group at `feature-test-plan.html` — the ready-to-demo checklist is their rehearsal for these 10 minutes

3:45 Show & tell 15 min

- ☐ Each group: 2 min. Room answers "what did you like?" after each

If a demo breaks live: "Congratulations — a live demo failure. That's the most authentic developer experience of the day." Then let them show it in the editor instead.

YOUR CLOSING

"Two hours ago you built one feature together, step by step. Then you described your own idea, Copilot helped you build it, you tested it, you fixed it, you shipped a demo. That loop — describe, build, test, fix — is the actual job. The tools will keep changing. The loop won't."

If you're stuck on something technical mid-session: open your own Copilot Chat, paste the student's problem in, and work through Nova's answer together, out loud. "I don't know, let's find out" is better teaching than knowing the answer.

Full detail, rescue plans, and every back-pocket idea are in **build-phase-guide.html** and **session-plan.html** if you need more than this script gives you. This page is deliberately the short version — everything you need to run the room without looking anything up.
