

Setup Guide v2

Personal accounts — no organisation, no Copilot Business needed

✓ You're using this one — Personal accounts

Org + Business version is a separate printable guide

Why this version exists: GitHub has paused new Copilot Business sign-ups for organisations on the Free/Team plan. This path sidesteps that completely — no organisation, no seats to manage, no waiting. Everything below happens on ordinary personal GitHub accounts.

0 Which accounts do you actually need?

This guide sets up **your own account**, and optionally **one test account** for Friday's run-through. On the real session day, every student creates their own account as normal — you are not creating accounts for them, and Copilot switches on automatically with zero action from you.

1 Get an email, if you need a second one

Skip if you're only setting up your own account

☐ Only needed for a second test account. Go to **gmail.com** → **Create account** → follow the prompts (free, ~3 minutes)

2 Create your GitHub account(s)

☐ Go to **github.com** → **Sign up** → enter email, password, username → verify with the emailed code

☐ Repeat for the second email if setting up a test account too

3

Turn on Copilot — per account

Fully self-serve — nobody needs to approve or assign anything

Free is already active the moment the account exists — 2,000 completions + 50 chat messages/month, no card needed. You can skip straight to Part 4 and only come back here if you want more.

- ☐ **Upgrade your own account to Pro (recommended):** profile photo → **Settings** → **Copilot** → **Change plan** → **Copilot Pro** → confirm (\$10/month)
- ☐ Leave the test account on **Free** for now — only upgrade it if the 50-message cap gets hit during testing

4

Build the workshop repo

On your personal account — no organisation involved

- ☐ Click + → **New repository** → name it `novapay-workshop` → **Public** → tick **Add a README** → **Create repository**
- ☐ **Add file** → **Upload files** → drag in `bank-dashboard.html` and `starter-template.html` → **Commit changes**
- ☐ **Add file** → **Create new file** → filename exactly:

`.devcontainer/devcontainer.json`

Paste in the config contents → **Commit new file**
- ☐ Repo **Settings** → tick **Template repository**

One step you get to skip: the org path has a "set Copilot access to all repositories" policy step here. Personal accounts don't need it — Copilot just works everywhere on the account automatically.

5

Install Nova

Identical either way — this file doesn't care whether an org exists

- ☐ **Add file** → **Create new file** → filename exactly:

`.github/copilot-instructions.md`

Paste in the full contents of `copilot-instructions.md` → **Commit changes**

Confirmed to work on Free, Pro, and Team plans — not a Business/Enterprise-only feature.

Test end-to-end

Do this on Friday

- ☐ Repo → **Use this template** → **Create a new repository** → name it `test-novapay`
- ☐ **Code** → **Codespaces** → **Create codespace on main** → wait for load
- ☐ Right-click `bank-dashboard.html` → **Open with Live Server** → confirm it renders
- ☐ Copilot Chat → type:

Who are you?

Should describe itself as a NovaPay mentor — not generic Copilot
- ☐ Have a realistic number of back-and-forth chats — if you're nowhere near 50 messages on Free, you're set; if you're closing in fast, upgrade that account to Pro before the real day
- ☐ Test repo → Settings → scroll down → **Delete this repository**

✓ This path vs. org + Business

	PERSONAL (THIS GUIDE)	ORG + BUSINESS
Blocked by current pause?	No	Yes, right now
Cost	\$0 or \$10/mo	\$19+/seat
Nova works?	Yes	Yes
Centralised billing?	No	Yes

Longer explanation of every step is in `setup-guide-v2.html` if you want more detail than this page gives.
